These numbers are organized hierarchically, with broader categories subdividing into more specific groups. For example, a group number might indicate a general category like "engine components" and further specify the exact part within that category.

Understanding the GM Parts Group Number System Organization and Hierarchy

The GM parts group number system is designed for clarity and ease of use. It generally follows this structure:

- Main Group Number:** Represents a broad category (e.g., 1 for engine, 2 for transmission).
- Subgroup Numbers:** Further divide the main group into specific components or assemblies.
- Part Number:** Unique identifier for individual parts within a subgroup.

This hierarchical approach allows for a logical and comprehensive catalog that covers all vehicle systems.

Example of Group Numbering

Suppose you come across the group number 12. This might represent the "Engine" category. Within this group, specific subgroups might be:

- 12.1: Cylinder heads
- 12.2: Pistons and rings
- 12.3: Valves and valve train

Each subgroup contains individual parts with unique part numbers, making it easier to locate and order precisely what is needed.

Common GM Parts Group Numbers and Their Significance

Understanding typical group numbers can greatly assist in quick identification. Here are some common examples:

- Engine and Related Components**
- 10: Engine blocks**
